

— Introduction · October 2026

Shaheen Money

Money without borders.
Access without limits.

Shaheen Money is building a simpler way to move, store, spend, and access money across borders.

A global digital money platform designed for people, businesses, and the partners who connect them.

A world where money moves as *easily as information.*

Today, borders still create friction around money.

People can message someone across the world instantly, but moving money between the same two people can still involve banks, intermediaries, high fees, delays, and limited access.

Shaheen’s vision is simple: make money more accessible, more connected, and easier to control, regardless of where people live, work, or send money.

OUR AMBITION

01 Make global money movement simpler	02 Connect digital money with real-world access	03 Give users greater control over their funds	04 Build an ecosystem where people, businesses, and partners can participate
---	---	--	--

Money is global. *Access to it isn't.*

The world has become borderless for communication, commerce, and work, but financial infrastructure has not evolved at the same pace.

FOR MILLIONS OF PEOPLE, MOVING MONEY INTERNATIONALLY CAN STILL MEAN

01

High costs

Fees and exchange-rate friction can reduce the value of every transaction.

02

Slow movement

Traditional rails can introduce unnecessary delays and uncertainty.

03

Limited access

Not everyone has equal access to banking and financial infrastructure.

04

Fragmented experiences

Users often need different services to receive, store, send, spend, and cash out their money.

05

Complexity

Multiple providers, accounts, verification processes, and intermediaries create friction.

The problem isn't just sending money.
It's everything around it.

“Can I send it?”

A successful money experience
needs to answer more than

USERS ALSO NEED TO KNOW

Can I receive it?

Can someone abroad
pay or support me
easily?

Can I keep it?

Can I hold value
without constantly
moving it between
services?

Can I use it?

Can I actually pay for
things digitally?

Can I access cash?

What happens when I
need physical money
in the real world?

Can I trust it?

Do I understand who
controls what, how
transactions work,
and where fees come
from?

Shaheen approaches the entire journey, not just the transfer.

One platform. One balance.

A complete money journey.

Shaheen brings the essential parts of digital money into one connected experience.

THE RESULT

A simpler financial experience where users don't have to think about the complexity behind every transaction.

A borderless digital *money platform.*

Shaheen Money enables eligible users to create and use a digital wallet designed around **receiving, storing, sending, paying, and accessing money globally**. Your balance is held in digital dollars, not in your local currency.

Your money should work around your life, not the other way around.

SHAHEEN CONNECTS

01

People

Families, freelancers, diaspora, and individuals.

02

Businesses

Merchants and businesses that need accessible digital money tools.

03

Connectors

Local partners that help bridge digital money with real-world access.

04

Financial & regulated providers

Third-party infrastructure supporting eligible funding, withdrawal, and regulated services.

This creates an ecosystem rather than another isolated financial app.

From receiving money to using it, *in one connected flow.*

01 Receive

Receive money from people, customers, or supported sources.

02 Store

Keep your balance in your Shaheen wallet and maintain control of your digital assets.

03 Send

Transfer supported assets to other users across borders.

04 Pay

Use your balance for supported payments, merchants, and everyday digital needs.

05 Cash out

Access supported withdrawal options through Shaheen's network and third-party providers.

One wallet.
Multiple ways to move value.

The complexity stays behind the experience.

Financial infrastructure should *feel invisible*.

SHAHEEN IS DESIGNED AROUND A SIMPLE USER EXPERIENCE

Clear	Users should understand what they’re doing before they confirm a transaction.
Fast	Money movement should feel closer to modern digital communication.
Accessible	The experience should serve users beyond traditional banking relationships.
Connected	Receiving, storing, sending, paying, and cash access should feel like parts of one system.
Controlled	Users maintain control of their wallet and supported digital assets through a self-custody model.

The goal isn’t to make users understand financial infrastructure. The goal is to make the infrastructure work for them.

Sample screen. Amounts are examples.

Move money across borders *without making borders the user's problem.*

Shaheen enables users to send and receive supported digital assets globally through a single wallet experience.

01

For families

Send financial support across countries without unnecessary complexity.

02

For freelancers

Receive international payments and maintain access to your funds.

03

For diaspora

Stay financially connected with family and communities back home.

04

For businesses

Receive and move value across markets with a digital-first infrastructure.

THE EXPERIENCE

One continuous journey instead of multiple disconnected services.

Global money should not mean *inaccessible money*.

Shaheen's opportunity is bigger than international transfers. It is about connecting **digital financial access** with **real-world communities**.

Through a network of users, Connectors, merchants, and supporting providers, Shaheen can create access points that extend beyond traditional financial infrastructure.

Digital when you want it. *Physical when you need it.*

That bridge is one of the most important opportunities within the Shaheen ecosystem.

Example corridors from the website

Bringing digital money *into the real world.*

Shaheen Money and **MoneyGram** are partnering to connect digital money with one of the world’s most recognized global money movement networks. The partnership helps bridge the gap between digital wallets and real-world financial access, giving Shaheen users more ways to move and access their money across borders.

WHAT THE PARTNERSHIP CONNECTS

THE BIGGER IDEA

Digital money shouldn’t stop at the wallet.

By connecting Shaheen’s digital ecosystem with MoneyGram’s global network, users can move between digital and physical financial experiences more naturally.

Shaheen isn't trying to be *another wallet*.

It is designed as an ecosystem connecting **money, people, businesses, and access.**

01

Borderless by design

Built around international money movement from the beginning.

02

One connected experience

Receive, store, send, pay, and cash out within one ecosystem.

03

Self-custody

Users can maintain control over their supported digital assets and wallet credentials.

04

Digital + physical

The model extends beyond a screen through Connectors, merchants, and access partners.

05

Partner-friendly

The ecosystem can connect with regulated providers, financial institutions, payment networks, and local businesses.

06

Built for real-world needs

The product is designed around how people actually receive, use, and access money.

Built as an ecosystem, *not a single financial rail*.

Shaheen's infrastructure combines multiple layers to create a complete experience.

01	Wallet layer	The user's digital wallet and asset control.
02	Transaction layer	Infrastructure for sending and receiving supported digital assets.
03	Application layer	The user experience for managing, moving, and using money.
04	Partner layer	Connectors, merchants, financial institutions, payment providers, and other ecosystem participants.
05	Access layer	Infrastructure that helps bridge digital balances with real-world financial access.
06	Compliance & provider layer	Supported regulated services and third-party infrastructure where applicable.

The architecture is designed to connect different parts of the financial ecosystem without forcing the user to navigate all of them individually.

Trust isn't a feature. *It's the foundation.*

Money products need to be built around transparency, control, and clear responsibilities.

01

Self-custody

Where applicable, users control their wallet and supported digital assets rather than Shaheen acting as a custodian by default.

02

Transparency

Users should understand transactions, fees, and the role of different providers.

03

Security

The platform is designed with security and protection of user access as core requirements.

04

Clear responsibilities

Shaheen, third-party providers, Connectors, merchants, and users each have defined roles within the ecosystem.

05

Regulated services

Where services require regulation or licensing, they can be provided through appropriate independent third-party providers.

Trust through *clarity*.

Security through *architecture*.

Control through *ownership*.

The world already moves money globally.

The opportunity is to make that movement better.

People increasingly live, work, study, sell, and support families across borders. That creates growing demand for financial infrastructure that works across

01

Countries

People need to move value between different markets.

02

Digital work

Freelancers and remote workers increasingly operate internationally.

03

Diaspora communities

Families remain financially connected across borders.

04

Global commerce

Small businesses increasingly serve customers and suppliers internationally.

05

Digital-native users

A new generation expects financial products to be as accessible and intuitive as the rest of the internet.

SHAHEEN SITS AT THE INTERSECTION OF THESE TRENDS

Global mobility × Digital money × Local access

One successful partnership. *A much bigger ecosystem.*

The MoneyGram partnership demonstrates what becomes possible when Shaheen's digital money infrastructure connects with established global financial networks. Now, the opportunity is to build on that model.

01

Financial institutions

Connect traditional financial infrastructure with Shaheen's digital-first ecosystem.

02

Payment networks

Expand how users can spend and move their money.

03

Merchants

Turn digital balances into everyday utility.

04

Local Connectors

Extend financial access into communities and local markets.

05

Technology partners

Build the infrastructure that makes global money movement faster, safer, and more accessible.

THE GOAL

Build an ecosystem where every new partner expands what Shaheen users can do with their money.

Because the network is *already becoming real*.

Shaheen is not building in isolation. Our partnership with **MoneyGram** demonstrates the potential of connecting Shaheen's digital money experience with established global financial infrastructure.

Don't just integrate with a wallet.
Help build the network around it.

FOR PARTNERS, SHAHEEN OFFERS

- 01 Global reach**
Connect with a borderless digital money ecosystem.
- 02 Real-world utility**
Move beyond the wallet and into everyday financial access.
- 03 Digital infrastructure**
Build on a platform designed around modern money movement.
- 04 New distribution opportunities**
Reach users through an expanding ecosystem of partners and access points.
- 05 Long-term ecosystem value**
Every integration can make the network more useful for everyone inside it.

Let's move money *together.*

The future of money isn't simply faster transfers. It's a world where people can **receive, store, send, spend, and access their money**, wherever life takes them. Shaheen Money is building that world, and we believe the biggest opportunities are created when strong ecosystems work together.

| Let's build the next generation of global financial access.
