

Money

COMPANY PROFILE

Access to money shouldn't depend on *where you were born*.

Shaheen Money is building an open financial network that connects North America, Europe and the Middle East, so people can receive, hold, send and cash out money wherever they are.

What we are building

An open financial ecosystem where people, businesses, banks, digital wallets, payment providers and cash networks work together instead of past each other.

Our ambition is not to replace existing financial institutions. It is to connect them, so that moving money across a border is as ordinary as sending a message.

That means payment corridors between North America, Europe and the Middle East, built on regulated partners and open payment rails, and ending at a shop where somebody can be handed cash.

How we got here

01

Bankey

Our first venture, built to make everyday banking simpler through a digital-first experience.

02

Empowch

A company founded on inclusion: giving people and communities the tools to take part in the global economy.

03

Shaheen Money

As stablecoins and open payment networks matured, we set out to turn them into something people can use every day.

From a transfer abroad to cash in *your hand*.

01 Receive

Money can come from family, a client, an employer or another compatible wallet. When it arrives, it shows in your balance.

02 Hold in dollars

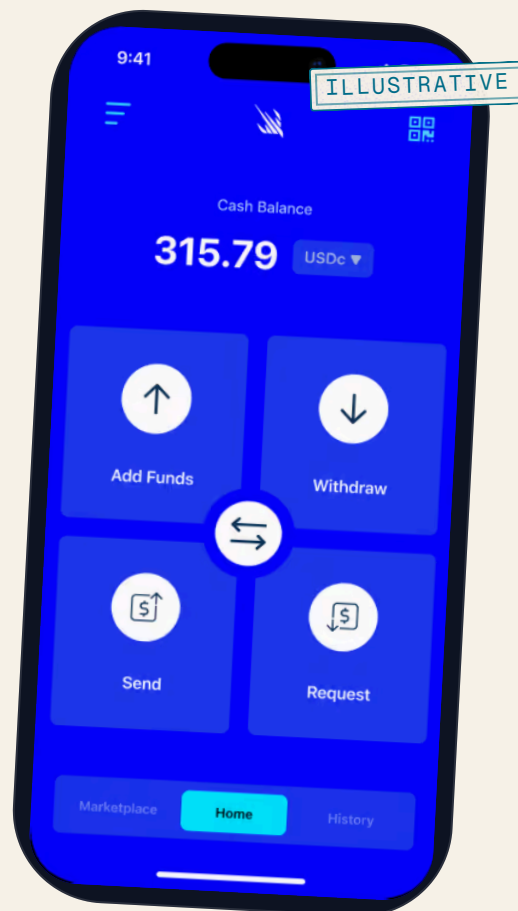

Your balance is held in digital dollars: a balance in US dollars, not in your local currency. You decide when to use it.

03 Send and pay

Send part of your balance to someone else, or pay directly from the app.

04 Cash out

When you need physical cash, ask for it in the app and collect it from a Connector: a local business in the Shaheen network.

Pricing

Receiving money	No fee
Sending money	No fee
Paying from your balance	No fee

SOURCE: Shaheen Money · September 29, 2026

Sending money home still costs *too much*.

Families who depend on money from abroad lose part of every transfer to fees and exchange-rate markups. Many have no account to receive it into at all.

6.36%

average cost of sending money across borders

① SOURCE: World Bank, Remittance Prices Worldwide
(<https://remittanceprices.worldbank.org/>) · Q3 2025

Global average total cost of sending the equivalent of US\$200.

77%

of adults in Lebanon have no account at a bank or mobile-money provider

② SOURCE: World Bank, Global Findex 2025
(<https://www.worldbank.org/en/publication/globalfindex>) · 2024 survey data

Account ownership was 23.0% of adults (indicator FX.OWN.TOTL.ZS).

Who it's for

Families

Your son sends money from Berlin. You collect it as cash down the street.

People abroad

You send support home. Your parents collect it where and when it suits them.

Freelancers

A client in Europe pays your invoice. You keep it in dollars until you need it.

Shop owners

Your shop becomes a Connector and earns on every cash-out it hands over.

Shaheen Money does not hold your money and does not own it. It is a self-custodial, decentralised wallet: your balance stays under your own control, and Shaheen Money acts only as the intermediary that carries out your instructions.

“I founded Shaheen Money because I believe where someone is born should never determine the opportunities available to them. Our mission is to build financial infrastructure that connects people, communities and economies, not just accounts and transactions.”

MOATAZ ALOBAID · FOUNDER & CEO

What we hold to

01 People before technology

Technology is only worth it if it makes someone's day easier.

02 Access before exclusivity

A good service is one people can actually reach.

03 Interoperability before isolation

We connect to banks, wallets and payment networks instead of walling people in.

04 Empowerment before dependency

Your money stays yours, to use when and where you choose.

05 Trust through transparency

Trust is earned by showing how things work and what they cost.

A digital dollar in your Shaheen Money wallet is a stablecoin: a digital token designed to keep a value of one US dollar. In the United States, the GENIUS Act of July 2025 sets the rules for payment stablecoins: a permitted issuer must back them at least one to one with reserves such as US dollars, insured bank deposits and short-term Treasury bills, publish the make-up of those reserves every month, and have that report examined each month by a registered public accounting firm. A stablecoin is not a bank deposit, is not insured by the FDIC, and is not issued by Shaheen Money. Your balance keeps its dollar value until you use it, instead of following your local currency.
